Download

changing is very simple to do. There are no settings to mess around with, and it takes less than a minute to change the MAC address of the network adapter. Simply enter the network adapter's name or IP address, followed by the MAC address, and the program will do all the hard work for you. Network Name and MAC Address of the default Network Adapter - The default network adapter's name and MAC address can be found directly from the interface itself. It is also possible to manually enter the network adapter's name and MAC address. Change the Network Adapter's MAC Address - There are a couple of ways to change the MAC address. The first is to manually enter the MAC address, while the other is to have the program suggest a MAC address for you to choose from. The program's suggested MAC address is a random one that can be restored to its default value later on. Change the Network Adapter's MAC Address to a Random Value - The MAC address of the network adapter can be changed to a random one, allowing for easy spoofing of data and messages. Restore the Network Adapter's MAC Address to the Default Value - After changing the MAC address of the network adapter, the program can restore it to its default value. Save and Load MAC Addresses - MAC addresses can be saved and restored, allowing for easy re-entry into the application. Intuitive Interface - The application's GUI is very easy to navigate and understand. All required settings are grouped together for easy access. Included Plugins - The application is capable of displaying the network adapter's MAC address in hex format, which is very convenient to anyone who wants to read it in their preferred format. Installation Folder - The application can be installed in several different places, giving the user flexibility when it comes to storage. 77a5ca646e
